

## *Specification*

A large range of lightly coloured to colourless natural aromatic waters from Trees, Herbs, Exudations, Fruits and Flowers, treated in a variety of ways to create delicately fragranced extracts with a gentle activity. Each *FlowerX* aromatic water contains the essential oil of the plant in a natural water base. The subtlety of the raw materials, and the unique manufacturing process, make the preparations ideal at standard strength for immediate bottling and for manufacturing where naturalness is imperative.

Hydrosol Identical waters contain *no* solubilisers, *no* surfactants and *no* preservatives; they are simply an infusion of aromatic oils in water.

Whilst their shelf life is limited compared to the more robust waters, they are eminently suitable for both undiluted use (*spritzers for instance*), or for inclusion in subtle natural formulae, (in particular for organic products where the use of preservatives is forbidden).

JARVIS recognise the additional need for more powerful longer lasting products, hence our range of standard waters. These products contain solubilisers and a gentle, yet effective, preservative system providing a substantially increased shelf life. Again, they can be taken for immediate bottling (*for linen sprays etc*) or for use as a raw material. For standard waters, clients are able to specify strengths (*see below*).

## *Quality*

*FlowerX* aromatic waters are thoroughly tested and prepared to the highest standards of quality control. Our procedures are covered in greater detail in "An introduction to JARVIS Botanical Extracts."

## *Delivery Schedules*

Because of the nature of *FlowerX* aromatic waters, they are made specifically to order. Where possible, we will process and dispatch within two weeks to most parts of the world. But for some of the more popular standard waters, where production is very regular, we can often provide delivery within one week.

## *Strengths*

For those products so indicated, JARVIS are able to supply *FlowerX* concentrates that can be diluted to your own requirements in your own production plants. This is particularly useful when shipping large quantities any distance. Please contact our botanical technical department (*details overleaf*) for further information, or go to our web site [www.pjd.co.uk](http://www.pjd.co.uk) for additional information.
